

Content Suite Security and Productivity Pack

Gain Better Control over your Content Server System

The Content Suite Security and Productivity Pack is a toolbox of handy Content Server tweaks and configurations to help adoption and usage of the system.

This module provides an ever-growing list of features and benefits for your Content Server installation:

✓ Location-Based Privileges!

- Control not only who can create objects such as folders, but **where** they make create them! “Folders only in Personal Workspaces”? No problem!

Location-based Privileges for Folders
Enable groups and locations where Folders can be added for people outside the system-wide privilege restriction groups.

Enable:	<input type="checkbox"/>	Enable location-based Folder privileges
Groups:	<input type="text"/>	Enable location-based Folder privileges for people in these groups
Allow in Personal Workspaces:	<input type="checkbox"/>	Allow Folder addition in personal workspaces
Allow in Workflow Attachments:	<input type="checkbox"/>	Allow Folder addition in workflow attachments
Allow in Locations:	<input type="text"/>	Select <input type="checkbox"/> Allow Folder addition in these locations

✓ Greater Collection Flexibility!

- Traditional Content Server requires “Permissions” access to delete a Collection. The Cassia Productivity Suite allows the level of delete permission to be configured – restricted to specific groups and locations!

✓ Greater Major/Minor Version Promotion Flexibility!

- Similarly to Collections, Content Server requires “Permissions” access to promote a minor version to a major version. The Cassia Productivity Suite allows the level of promotion permission to be configured.

The Content Suite Security and Productivity Pack module for Content Server is your solution for increased usability!

- ✓ Advanced Versioning!
 - In order to promote minor to major versions, people must have “Edit Permissions” permissions on the Document. However, the “Edit Permissions” permissions are usually provided only to a few content and systems administrators. The advanced versioning feature provides the benefits of promoting versions to people without “Edit Permissions” permissions.

- ✓ Supplemental Markings Locker!
 - People who are members of the Security Officer Group can add and remove supplemental markings from items. This feature restricts the removal privilege to people in certain groups.

- ✓ Quick Object and Usage Privileges!
 - This is an additional feature available for system administrators.

The Content Suite Security and Productivity Pack is for any OpenText Content Server customer that wants to have greater control over their Content Server implementation.
